# Appendix – Market outlook

Summary 10

#### Macro Outlook

- Our **baseline macro scenario** is for growth convergence in major economies, moderately above target inflation, and gradual rate cuts
- However, policy uncertainty has risen to extreme levels, creating the risk of materially weaker growth
- In China, policy support measures for households, signs of stabilisation in the property market, and expansionary fiscal policy should help mitigate rising external risks
- Rising trade concerns are likely to have diverging effects on Asian economies while macro policies should be supportive for growth

#### **Policy Outlook**

- ◆ The Fed is in "wait and see" mode. We expect gradual easing as the FOMC attempts to balance below trend growth and above target inflation
- A sizeable shift in fiscal policy in Germany should boost growth in 2026. The ECB is expected to cut rates twice more this year
- Rising global trade uncertainty may have an uneven impact across Asia. The RBI should ease, while a weak currency constrains Bank Indonesia
- Chinese policymakers announced a new 30-point plan to boost household consumption, including measures to stabilise the equity market. This should lessen downside growth risks, and ease deflation concerns

#### **House View**

- Increased policy uncertainty has boosted market volatility, which is consistent with our view of markets 'spinning around' in 2025
- We think market leadership can continue to shift to previously lagging sectors and regions, but performance could be 'stop-start'
- The US dollar is vulnerable to further signs of a weaker US economy. This bodes well for EM local currency stocks and bonds
- Diversification is a key theme. Alternatives, such as private credit, hedge funds and defensive real assets can build resilience into portfolios. Gold has been a good hedge against uncertainty

#### **Scenarios**

SPINNING AROUND Our central scenario. Stop-start tariff escalation and moderate US spending cuts. Extreme uncertainty. Stock market leadership broadens out. EMs are resilient

TOPPLING OVER Full blown global trade war and major US spending cuts. Sharp slowdown in growth, hitting EMs. US stocks enter a bear market. Rates rally across the curve

TAKING OFF Tariff risk dissipates. Animal spirits boost global growth. Europe catches up with resilient US. Stocks perform well. EMs rally as global growth projections upgraded

Source: HSBC Asset Management as at April 2025. The value of investments and any income from them can go down as well as up and investors may not get back the amount originally invested. The views expressed above were held at the time of preparation and are subject to change without notice. HSBC Asset Management accepts no liability for any failure to meet such forecast, projection or target.

House View

Against a backdrop of policy uncertainty, global growth should converge, with central banks still on course to cut rates. We think this scenario is consistent with a **broadening out of performance** to laggard sectors and regions. In emerging markets, a weaker US dollar and further Chinese policy stimulus support the outlook

- ◆ Equities In the US, growth concerns, and recent reversals in expensive largecap technology stocks have driven a pick-up in market volatility. A broadening out of performance has benefited more attractively valued markets in Europe and Asia. We prefer the growth outlook in emerging and frontier markets
- ◆ Government bonds A cautious Fed, inflation risks stemming from uncertain trade policy, and fiscal concerns should keep yields above 4% for most of 2025. But volatility spikes and a wide trading range are likely
- ◆ Corporate bonds Recent volatility has moved spreads wider. Investment Grade fundamentals remain solid, but High Yield spreads could be affected by the impact of policy uncertainty and a consumer slowdown on corporate profits

House view represents a >12-month investment view across major asset classes in our portfolios
Source: HSBC Asset Management as at April 2025. The level of yield is not guaranteed and may rise or fall in the future. Any forecast, projection or target where provided is indicative only and is not guaranteed in any way. HSBC Asset Management accepts no liability for any failure to meet such forecast, projection or target. The views expressed above were held at the time of preparation and are subject to change without notice. This information shouldn't be considered as a recommendation to invest in the country or sector shown.

Global equity returns continued to 'spin around' in March, with US stocks volatile, and European and emerging market indexes advancing. US Treasury yields were range-bound as markets played wait-and-see on policy direction. The US dollar fell sharply, while gold hit new highs

- ◆ **Government bonds** US 10-year Treasury yields edged slightly higher through the month as markets weighed uncertainty over the economic outlook and trade policy. German Bund yields rose sharply on major public spending commitments
- Equities In developed markets, the US stocks were volatile and trended lower, with large-cap technology firms leading the overall decline. By contrast, European stocks rallied. In emerging markets, India saw a sharp recovery, and there were broad gains across Latam, emerging Europe, and China
- ◆ Alternatives Real asset indices were mixed in March. Infrastructure equity and hedge funds saw positive returns, but there was some weakness in real estate. Elsewhere, the oil price was range-bound and gold broke above USD3,000

Past performance does not predict future returns. The level of yield is not guaranteed and may rise or fall in the future. This information shouldn't be considered as a recommendation to invest in the country or sector shown. The views expressed above were held at the time of preparation and are subject to change without notice.

Macro scenarios

Trade/ Fiscal

Growth

Inflation

Monetary Policy

China

Full blown **global trade war** and major US spending cuts (**DOGE**)

**Sharp slowdown** as real incomes undermined and confidence hit

Short-term boost to inflation, but fades as demand destroyed

Initial pause in rate cuts, but then **big easing** amid growth damage

Tariffs and property sector weakness weigh on growth

## SPINNING AROUND

Stop-start tariff escalation and moderate US spending cuts. **Extreme uncertainty** 

US growth moderates to around 1.5-2%. **End of US exceptionalism** 

Converges to around 2.5%, but path remains bumpy

A few rate cuts for Western central banks

**Stable growth** as domestic policy easing offsets headwind from tariffs

#### **TAKING OFF**

Tariffs as a bargaining tool. "Mission economy" takes hold in Europe

**Animal spirits** boost global growth. Europe catches up with resilient US

Settles in 2.0-2.5% "grey" range - not high enough to prompt Fed hikes

**Easing cycle cut short**. Higher neutral rate

**Growth pickup** as property sector recovers and confidence returns

**HSBC AM VIEW**

Market scenarios

**Stocks** 

**USD** 

Top bets

SPX enters **bear market**. US tech vulnerable given valuations. VIX spike

**Rates rally** across the curve, curve steepens. Credit spreads widen

**EMs hit** amid weaker global growth and trade challenges

**USD boosted** by safe-haven status, but weaker in Trump 2.0?

USTs, gold, CHF, macro HFs, best IG, defensives, quality, momentum

**Broadening out** of market leadership to laggard sectors, regions. VIX picks up

Range-bound yields, some upside risk to credit spreads. **Focus on income flows** 

Does well amid growth resilience, Fed cuts, China stimulus and good valuations

**Tug of war** between US inflation pressures vs end of US exceptionalism

Value, quality, mid-caps. EM/Europe/Japan > western markets. IG > HY

#### TAKING OFF

**Global stocks perform well**. Highbeta markets shine

Some **upside risk to yields** as growth remains strong. Credit spreads still tight

**EM rallies** as global growth projections upgraded, better trade news discounted

Upside to USD limited by global growth expansion. EUR rallies

Europe/China > US. HY credits. Industrial metals. China. Crypto>gold.

Economic outlook

# Narrowing US growth differential versus DM, China policy boost

		Consensus		Policy 50-0	
		Growth	Inflation	End-25 policy rate (HSBC AM)	2025 Fiscal impulse
		■2025 ■2026	■2025 ■2026		
SN	Survey measures, like consumer confidence, are weakening. Hard data, including for the labour market and corporate profits, remain resilient. Fed Chair Powell has signalled a "wait and see" stance, highlighting the uncertain economic outlook, but the FOMC still signals further gradual easing	1.9 1.9	2.5 2.4	3.50-4.00%	Mild drag
Eurozone	Germany unveiled a sizeable EUR500 bn infrastructure investment fund (to be disbursed over 10 years) and has committed to additional defence spending. This should provide a boost for medium-term growth but, near-term, rising trade uncertainty is a headwind	0.9	2.2 2.0	1.75-2.25%	Neutral
NU	The BoE is faced with sticky wages and inflation but low growth. On balance, this points to gradual easing, given policy is still restrictive. The BoE attributes weak UK growth to supply and demand factors. Higher-for-longer interest rates limit the scope for fiscal support	1.0	3.1	3.50-4.00%	Mild boost
Japan	The BoJ is gradually normalising monetary policy. BoJ governor Ueda warned of "heightened uncertainty" in US trade policy. The FY25 shunto pay round was "at the higher end of expectations" which should support household consumption and push service sector inflation towards 2%	1.2	2.6	0.75-1.00%	Drag
China	China's State Council issued a 30-point action plan to boost domestic consumption, including measures to stabilise the stock market, crucial for consumer confidence. Investment, production and retail sales saw broad-based gains in January-February, but the real estate sector remains a drag on activity	4.5	0.6	1.00- 1.40%*	Boost
India	Growth has been moderating since mid-23 amid weaker private sector investment. But the structural growth story remains intact, supported by favourable demographics and rising incomes. Headline inflation dropped below the RBI's 4% target in February, paving the way for further gradual easing	6.5 6.5		6.00-6.50%	Neutral

Past performance does not predict future returns.
